

Therapeutic Mapping of Replicated SLE Risk Loci

Test redesign: gene-centered summary linking discovery strength, targetable biology, and clinical positioning

Statistical Support

Putatively novel locus Previously reported locus

Therapeutic Biology

Type II Interferon / IL-12 Signaling
Complement Receptor / Neutrophil Adhesion
Myeloid / Interferon Response
T-cell Co-stimulation (OX40L)
Fc Receptor / Immune Complex Clearance
IL-12 / Th1 Polarization
Autophagy / MHC-II Regulation

Drug Context and Status

Baricitinib, Tofacitinib Strong — Primary discovery hit	FDA-approved SLE 2022
Eculizumab (C5), Avacopan (C5a) Strong (GWAS + eQTL)	Approved / Phase III
Anifrolumab, Baricitinib Strong (GWAS + eQTL Lymphocyte)	Approved
Itepekimab (OX40L pathway) Moderate (GWAS)	Phase II SLE
IVIg, Efgartigimod (FcRn) Strong (GWAS)	Approved / Phase III
Ustekinumab (Stelara) Strong (GWAS + eQTL Lymphocyte)	Approved / SLE studies
Sirolimus, Everolimus Moderate (GWAS)	Investigational SLE
